Let's take a look at all the miui features together and Expert! You have a Xiaomi smartphone? Then you absolutely need to know these tips and tricks. 36 Description of article 483 Subscribers Subscribed Everyone needs Therefore, over the years there have been many calculators and they are actually quite easy to find. Most people use them to figure out things like how much to tip in restaurants and students should literally have for school. Believe it or not, Android can solve all your needs in this case. Most people won't have to look much further than the warehouse calculator app on their phone. Google's calculator app is pretty decent as a very basic substitute. This way we'll focus more on some of the more sophisticated calculators you can find on mobile devices. Here are the best calculator apps for Android! CalcCalcCalcClevCalcGraph GraphorDigitalchemic Calculator AppsRead more: 10 best productivity apps for Android10 Best Apps in the Calendar for AndroidCalcPrice: Free/Up to \$1.49Calc is a calculator app from developers, oddly enough. Today Weather. Developers have done the weather right, and they've also nailed the app space to the calculator. This is a simple, functional calculator application with a fairly typical user interface. Some features include the ability to reuse old answers on your next calculation, calculator history, and topics. This is great for easy use, although some users complain about the advertising strategy and a few mistakes here and there. We do not recommend using this for your collegial level trigonometry class, but this should be done well to help divide the check for lunch. CalcuPrice: Free/\$1.99Calcu is one of the most popular calculator apps for Android. He offers all the basics. Some other features include calculation history, memory keys, various customization features, themes, and gesture controls. It's not a complete scientific calculator, but it has enough features to go beyond what you usually find in basic calculators. The free version of the app contains advertising. You can remove ads for one purchase from \$1.99. Otherwise, the two versions are basically the same. This is a good competitor for the warehouse calculator app that comes on most devices. ClevCalcPrice: FreeClevCalc is something of an all-in-one solution for calculator apps. It has a common calculator with its usual operators. It also contains simple trigonometric and logarithmic functions. However, something that defines this calculator is anything else it can do. Some of the additional features include currency conversion, unit conversion, unit price calculator, and various other tools. Another example is the discount calculator. You enter the exclusion price and percentage, and the app will tell you your new retail price. We recommend that you check the Play Store description for the full list because it's quite long. Desmos Graphing CalculatorPrice: FreeDemos Graphing is a good mobile substitute for more popular graphics calculators. It can do basic things like most calculator apps. There is also a full assortment of scientific calculator options. This is a basic calculator that does everything you expect the calculator app to do. The second is a liver calculator. Its main focus is factions. It allows you to make calculations using them without breaking them into decimal format. This is excellent for early math, especially for children. The last one is a Hitler calculator. It's essentially just a plus calculator, but with more artistic themes. You can go with any of them, but we listed it here because of its fractions calculator, because you do not see good from this one every day. Read more:15 the best Android apps available right now10 best to make a list of apps for AndroidFinancial CalculatorsCenter: FreeFinancial Calculators is a series of calculators to help you take advantage of your finances. It has dozens of modes of transport that can help you quickly and easily calculate everything from 401k installments to student loan repayment, home loan interest and even how much tax you owe from each salary. There are several errors reported with some of the modes, but the majority of them work perfectly. Anyone who needs help calculating their finances should check this out. It's completely free, no in-app purchases. But there are commercials. HEdu Scientific CalculatorPrice: Free/\$1.49HEdu Scientific Calculator is a surprisingly good scientific calculator. He's doing all the basics right. He also works with more advanced things like logarithms and things like that. The user interface is clean and simple and the application includes over 1000 mathematical formulas. You can basically do whatever you need short of graphics and there are other calculators for this. This may upset some people, but it's still accurate. The pro version works for \$1.49.HIPER Scientific CalculatorPrice: Free/\$2.99Hiper Scientific Calculator is one of the best calculator applications, especially for educational use. It has most of the basic functions of the scientific calculator, built-in unit converter with over 200 units, and even some obscure features such as random number generator, permutations, etc. Most of the features are available in the free pro version, which offers up to 100 decimal places and nine digits of exhibits. That also supports them. The pro version works for \$2.99, but the free version works too. MyScript 2Price Calculator: \$2.99MyScript Calculator 2 is one of the most fun Android calculator apps. This allows you to write your equation. The application uses OCR to turn it into a text format and then helps you solve the problem. This is for use, fun for children and adults, and has a certain satisfaction from writing the equation yourself. The application supports basic operations, operations, exponential, some trigonometry, logarithms, constants, etc. Thus, it is usually good enough through high school and up through collegiate levels for most people. However, those who splash out in super-complex math will max out this app pretty quickly. Your phone's calculatorPrice: FreeHere is something, people. Unless you're a student, mathematician or accountant, you probably don't need a super-complicated calculator app. Many people only need these things to determine how to tip in a restaurant or count their drawers at the end of the night at most people. That's why the calculator your phone already has is perfectly capable of doing the job. We really only recommend the other nine apps on this list if your built-in calculator is really bad. Don't feel the need to download a third-party app just because of it. For those interested, Google Calculator is connected to the button below if you want the most basic calculator that works.
